Industrial applicability (IA)	Claims	1-26	YES
	Claims		NO

## 2. Citations and explanations (Rule 70.7)

WO-A-01 56720 (D1), which was mentioned by the applicant in the description, is regarded as the closest prior art. It discloses a safety device with the features of the preamble of claim 1.

The subject matter of independent claim 1 differs from this prior art by the design of the adjusting device according to the characterizing part of claim 1.

Therefore, the subject matter of claim 1 is novel (PCT Article 33(2)).

This design solution, which enables tools to be exchanged without disassembling the safety device is not rendered obvious by any of the cited documents.

The solution proposed in claim 1 of the present application therefore likewise involves an inventive step (PCT Article 33(3)):

Claims 2-26 are dependent on claim 1 and therefore likewise meet the PCT requirements for novelty and

inventive step.

## Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

The wording of claim 1 (see, for example, "safety device ... with at least one holding device, which is embodied as an adjustment device, for the safety device on a pressing bar that can be fitted with bending tools in a tool receiving device..." does not make it clear (PCT Article 6) whether the subject matter of claim 1 relates to a safety device *per se* or to the combination of a manufacturing machine and such a safety device.

The statement in claim 1 "... characterized in that the adjusting device has a guiding and arresting device that can switch between a released position and a holding position, a locking element of a locking device ..." appears to be incomplete and therefore lacks clarity (PCT Article 6).

The above statement was interpreted as follows in this report:

"... characterized in that the adjusting device has a guiding and arresting device that can switch between a released position and a holding position and has a locking element of a locking device,..."
